Encrypted Data Protection

**186k**  
Limited

## 186k Backup: The Focus Limited

Every Business relies on the security of its data. Any Business that fails to keep backups of vital data can be at high risk and many companies who suffer data loss are closed within 12 months.

To combat this 186k Limited has launched a unique backup solution, removing the need for bulky tapes and expensive data drives. Just download our software and away you go.

186k Limited Backup service provides a 256 bit encrypted solution to holding valuable data offsite, while remaining accessible 24/7.

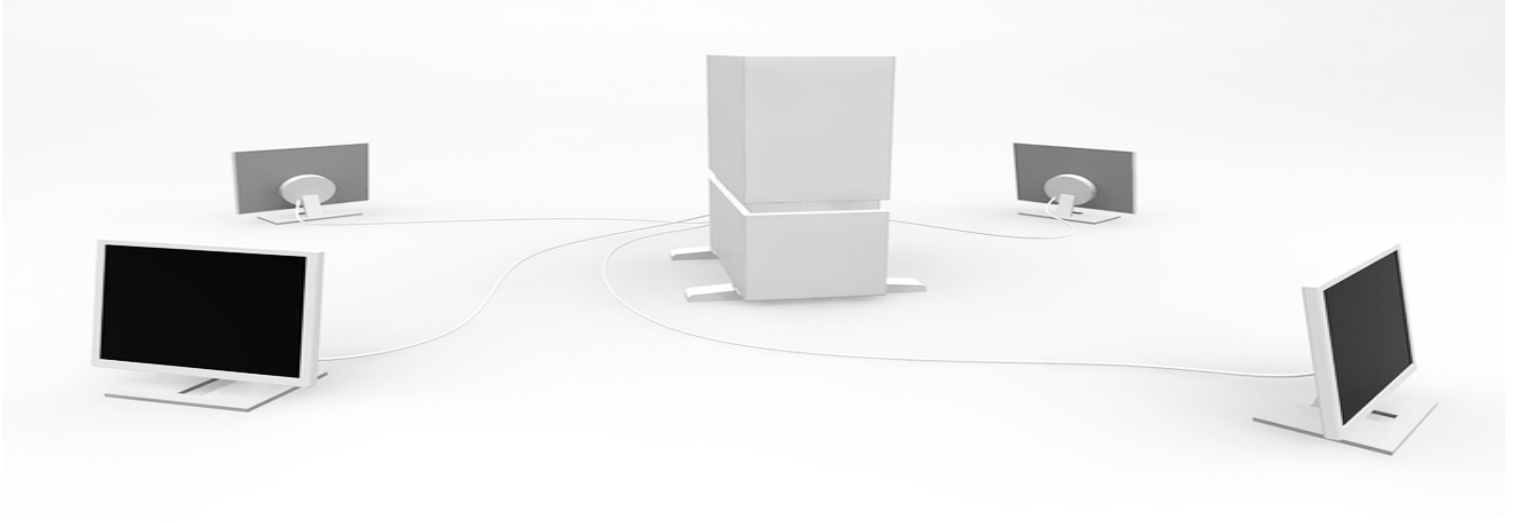

186k Limited software talks directly to our backup server, removing the requirement of complex configurations. The Software is easy to use, reliable and secure 256 encryption.

## 186k Server and Solution... Limited

- The Backup server is hosted in our Leeds Data Centre, with 24/7 CCTV and security far greater than any small office. With fire suppression and additional generator & UPS systems in place you can be sure that any data sent and stored with 186k Limited is safe, secure and retrievable when required.
- The unique Backup solution comes with 10GB of space, this is available through the Dolphin portal. Once the Backup service has been ordered and configured, the order displays a link to download the software which can be given out to any end user to be branded as your own.
- The additional storage comes in 10GB, 20GB and 50GB packs and is available to obtain upon request.
- Clients can schedule backups to run at any point during the day or night, any day of the week which ensures their data is transferred at a time that suits them best.

# Backup: The Design

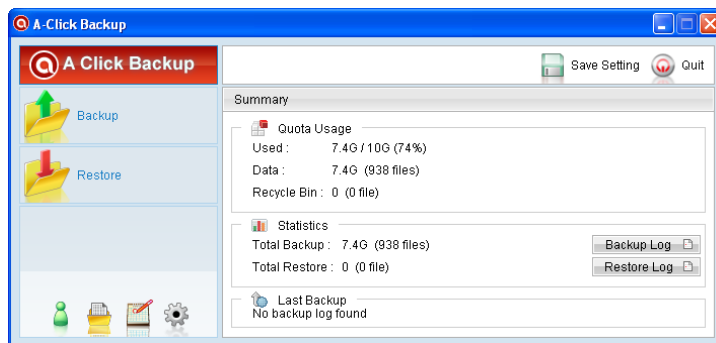

The backup software is a simple to use application with little configuration required to run scheduled backups.

Downloading the software requires approx 58Mb of hard drive space. The installation will take approximately 5 minutes to complete and the software will automatically connect to the backup server as long as your machine is connected to the internet.

## The System in use...

- The main systems screen has information on the current space available, history of your last backup and restore functions along with some basic configuration options.

By clicking the bottom left icons you can configure your files to backup, schedule them for certain times and dates and then save the settings. Alternatively you can click the Backup or Restore icons to perform each action instantly.
